

FENOMELT Hotmelt Adhesives

The Fenomelt hotmelt adhesives can be considered for a very wide range of applications. This product series is based on four different types: **Fenomelt A-types** (APAO-based), **Fenomelt E-types** (EVA-based), **Fenomelt M-types** (metallocene-based) and **Fenomelt S-types** (SBS/SIS-based). Unlike other adhesives, such hotmelt adhesives consist of 100% solids and are solvent-free. Easy storage, insensitivity to cold, long shelf-life and easy handling round off the advantages of the Fenomelt products. Our hotmelts result in durable, long-lasting adhesive joints that are characterized by high resistance to ageing and adhesive seams that remain flexible. Thanks to its many years of know-how, Fenos AG is able to adapt various end properties of the Fenomelts quickly and precisely to customer requirements. The low-odor, eco-friendly Fenomelt grades can be easily applied, i.e., by spinning, spraying, nozzle or roller application and are extremely user-friendly due to low processing viscosities.

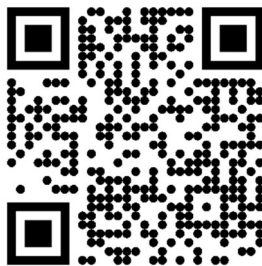

Main Applications

- Mattress production
(foam/foam, nonwovens, metal, etc.)
- Upholstered furniture (wood, foam, etc.)
- Automotive (e.g. lamination, fixation)
- Building and construction

Properties & Benefits

- Environmentally friendly & low odor
- Excellent processing viscosities
- Easy storage
- Robust & durable bondings
(Ageing resistant, flexible, etc.)
- OEKO-TEX certified grades available
